

SecondBrain

A voice-first personal assistant that lives inside WhatsApp.

SecondBrain helps you capture thoughts, schedule events, save notes, archive melodies, and chat with a local AI model using natural language and voice messages.

Unlike cloud-based assistants, SecondBrain runs locally on your own machine. Your notes, recordings, calendar integrations, and AI conversations remain under your control.

Features

Voice Notes → Obsidian

Send a voice message such as:

"Buy milk and eggs"

SecondBrain automatically transcribes the audio and saves it as a note inside your Obsidian vault.

Voice Notes → Google Calendar

Send a voice message such as:

"Meeting tomorrow at 5 PM"

SecondBrain extracts the date and time, creates a calendar event, and adds it to your Google Calendar.

Voice Notes → AI Chat

Ask questions naturally:

"What are black holes?"

The message is transcribed and sent to a local AI model running through Ollama, and the response is returned directly in WhatsApp.

Melody Capture Mode

Creators often record melodies, hooks, and musical ideas before they disappear.

Enable Melody Mode and send a voice note.

SecondBrain automatically:

- Saves the original audio recording
- Creates an Obsidian note
- Links the audio file to the note
- Archives your ideas for future use

Delete Last Note

Mistakenly saved a note?

Simply say:

"Delete last note"

and SecondBrain removes the most recently created note.

Technology Stack

- Node.js
- WhatsApp (Baileys)
- Ollama
- Gemma 3
- Faster-Whisper
- Google Calendar API
- Obsidian

Philosophy

SecondBrain is built around a simple idea:

Capture first. Organize automatically.

Instead of opening multiple apps, typing notes, creating calendar events manually, or searching through folders, you simply talk.

SecondBrain listens, understands intent, and performs the appropriate action.

Privacy

SecondBrain is designed to run locally.

Your voice recordings, notes, AI conversations, and personal data remain on your own machine. No external AI services are required.

Roadmap

- Daily WhatsApp Briefings
- Smart Note Search
- Note Summaries
- Voice Reminders
- Task Management
- Memory System
- Multi-language Support
